Carbon Reduction Plan

Supplier name: Flomation Ltd
Company registration number: 16426271
Registered office: Ruscoe House, The Chequer, Whitchurch, Wrexham, SY13 2JJ
Publication date: 9 June 2026

Commitment to achieving Net Zero

Flomation Ltd is committed to achieving Net Zero greenhouse gas emissions by 2040.

As a fully remote software business powered by renewable electricity and on-site solar generation, our operations are already very low carbon. We are committed to measuring our emissions, keeping them low, and reducing them further over time.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that were produced before the introduction of any strategies to reduce emissions. The baseline emissions are the reference point against which future emissions reductions are measured.

Baseline Year: 1 June 2025 to 31 May 2026

Additional details relating to the Baseline Emissions calculations:
This is our first Carbon Reduction Plan. As Flomation Ltd was incorporated in May 2025, this reporting year covers our first twelve months of operation, aligned to our 31 May financial year end. Our baseline year is therefore the same as our current reporting year. Emissions were calculated in line with the UK Government's greenhouse gas reporting conversion factors (2025 dataset). Scope 2 electricity emissions are reported on a location-based basis (UK grid average). Our actual electricity supply is on a 100% renewable, REGO-backed tariff, which gives a market-based Scope 2 figure of zero (see note below the table).

Baseline emissions:

EMISSIONS	TOTAL (tCO2e)
Scope 1	0.00
Scope 2	0.93
Scope 3 (Included Sources)	0.03
Total Emissions	**0.96**

Note: On a market-based basis, reflecting our 100% renewable (REGO-backed) electricity tariff, Scope 2 emissions are 0.00 tCO2e, giving a market-based total of approximately 0.03 tCO2e.

The Scope 3 emissions above cover the following categories required under PPN 006:

- Category 4 - Upstream transportation and distribution: Not applicable. As a software business we do not purchase the transport of physical goods.
- Category 5 - Waste generated in operations: Negligible. As a fully remote business with no premises-based operations, operational waste is minimal.
- Category 6 - Business travel: 0.03 tCO2e, from six return trips of approximately 40 miles each way by electric vehicle.
- Category 7 - Employee commuting: Zero. All staff work from home permanently. (Homeworking energy is an optional category under PPN 006 and is not included.)
- Category 9 - Downstream transportation and distribution: Not applicable.

Current Emissions Reporting

Reporting Year: 1 June 2025 to 31 May 2026

As this is our first Carbon Reduction Plan, the current reporting figures are the same as our baseline above. Future updates will report the latest year so that progress can be compared.

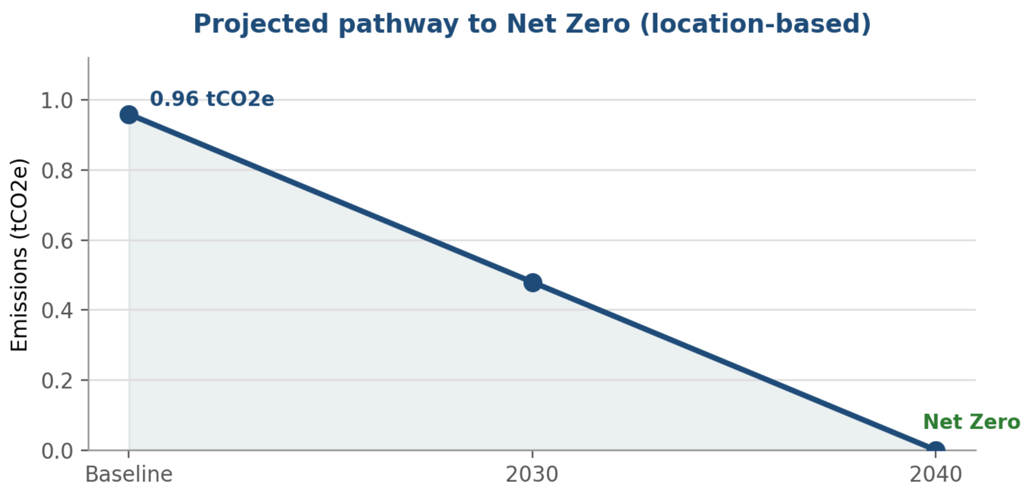
EMISSIONS	TOTAL (tCO2e)
Scope 1	0.00
Scope 2	0.93
Scope 3 (Included Sources)	0.03
Total Emissions	**0.96**

Emissions reduction targets

We have already substantially reduced our environmental impact through on-site solar generation, a 100% renewable electricity supply, fully remote working and low-carbon travel. Our remaining location-based emissions come almost entirely from electricity imported from the grid.

Our target is to reduce our location-based emissions by at least 50% by 2030, primarily by increasing the share of our self-generated solar power that we use directly. We remain committed to achieving Net Zero greenhouse gas emissions by 2040, and we are already effectively net zero on a market basis through our renewable electricity supply.

Progress against this target is shown in the graph below:



Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental measures are already in place.

- A 3.6 kW solar array at the site housing our IT infrastructure generates renewable electricity on-site, reducing the amount of electricity we import from the grid.
- On-site battery storage allows us to use more of our self-generated solar power and further reduce grid imports.
- Our electricity is supplied on a 100% renewable, REGO-backed tariff.
- All staff work from home permanently, removing commuting emissions and the need for a separately heated office.
- The site housing our IT infrastructure requires no separate fossil-fuel heating; waste heat from the IT equipment provides the heating.
- All business travel is undertaken by electric vehicle or public transport.

Planned Carbon Reduction Initiatives

In the future we intend to implement further measures such as:

- Continuing to procure 100% renewable electricity.
- Monitoring and, where practical, improving the energy efficiency of our IT infrastructure.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and the associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard, and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of Flomation Ltd:
